

ICEBUG®

FALL
WINTER **2024**
LOOKBOOK

A changemaking community

Our vision is to be a changemaker for a society where people can thrive, on a planet in balance.

This is not some dreamy, distant outcome of the work we do.

It is the work.

Every day, for all of us.

It's time to take on the world

It may sound a bit over the top and not as humble as we usually like to be – but it is true. For years, we have been challenging the footwear industry to do better. We've been offering the best traction, and we've shown that you can run a flourishing business with respect for people and planet. We cannot do this from the sideline. It is time for Icebug to grow in impact.

What we offer is vital: we give people the gear needed to move outside – no matter the conditions. In big parts of the world, ice and snow is a real problem that cost people life years and society billions. Our traction technologies are an answer to this and should be widely used. Today, they are household products in Scandinavia, and as of now we will do all we can to make them so in all parts of the world where people still slip and fall – or stay inside to avoid doing so.

Secondly, our sustainability work needs to be scaled. Our programs within solar energy and sustainably sourced natural rubber must be used by more brands and more should copy our pioneering transparency work, known as Follow the Footprints. If we succeed in inspiring others – our impact will grow exponentially.

This is not the time for Icebug to lay low. Rather, this is the time for us to put in a new gear and do all that we can to make our impact even greater.

Our objective is to become the premier brand from Scandinavia for a lifestyle of health and sustainability. We plan to do so by offering outstanding footwear that you can use for at least twice as long as the competition.

A future fit business is a business that also serves the common good. We want our footwear to be used – a lot – and help people be physically active and connect with others and nature. To us, a great number of uses per year means that Icebug is doing well, and that the world is doing better from people enjoying a sustainable, outdoor lifestyle.

*This collection marks the start of a new journey.
Welcome to be a part of it!*

The decisive decade.

2020-2030 has been named the “decisive decade”, where we need to take action to counter climate change and biodiversity loss, and we believe that’s true.

These times call for all of us to find our inner motivation for becoming our version of activists, to find what we love and how we want to protect that.

It's you being a changemaker that will make a difference.

How we make a difference.

1 % FOR THE PLANET

1% of our sales are always donated to environmental nonprofits. NPOs we have supported last year:

Naturarvet, Hej Främling and Tuki Nepal.

FAIR WEAR FOUNDATION

Icebug is member of Fair Wear Foundation, an international non-profit organization with focus on labour conditions in garment and footwear production.

The mission is to help the industry to secure safe, dignified and properly paid employment for their workers. All Icebugs assembly factories have been audited during last year and are closely followed up for regular improvement. Fairwear also evaluate and publish Icebugs effort as a brand.

B CORP

As a certified B Corp, Icebug is part of a global community of businesses that meet high standards of social and environmental impact.

We want to use our business to make a positive impact in peoples' lives. We are aiming at changing the shoe industry in a sustainable direction.

FOLLOW THE FOOTPRINT™

Through Follow the Footprints™ we make it possible to easily follow and check that we walk the talk. Simply scan the QR code and you will come to a website where we present the product's key sustainability indicators:

- Carbon emissions, kg CO2 equivalents per pair of shoes
- Weight-% of recycled materials
- Weight-% of biobased materials
- Product journey - the suppliers that made this shoe.

Scan this code and see all information about Aura ReWool RB9X®

FSC® certified Natural rubber in outsoles

FSC® secures sustainable forestry (rubber farming) and good working conditions and traceability in the whole value chain.

Icebug initiated a collaboration in 2021 with Forest Stewardship Council® (FSC) and other footwear brands to develop an FSC® certified footwear rubber supply chain in Thailand. We invited other footwear brands to source from the same supplier in order to increase the volumes and keep the farmers and rubber processor motivated.

Icebug is now FSC® certified (license code: FSC-C173562) and so is the whole value chain. From SS23 all the natural rubber that we source for our outsoles is FSC® certified natural rubber from small holder farmers in Thailand. As we use recycled trim-off material in our outsoles we need a transition period before FSC® labelling the shoes.

For FW24 we aim to FSC® label all styles.

Switching to solar energy

In 2021, we formed a partnership with the Clean Energy Investment Agency (CEIA) and several well-known brands to initiate rooftop solar energy installations in our partner factories in Vietnam. Through meticulous feasibility studies, we identified the potential for substantial benefits, including up to 67% reduction in climate emissions and significant energy cost savings – a real Win-Win!

All three assembly factories in Vietnam have embraced the project and moved far along the many steps needed to complete it. The combined impact of these installations will surpass the total emissions generated throughout Icebug's value chain. As Icebug represents a smaller portion of these factories' total output, the impact on our own emissions is less than 10%. This exemplifies Icebug's commitment to scaling impact.

We now extend an invitation to other brands to join us in this initiative, making the process more accessible and cost-effective for them. By working together, we can accelerate progress and collectively address the climate crisis we face. At the time of writing, five brands have joined and more are likely to join during the year.

We expect that once the solar installations are in place, carbon footprints will be lowered around 1 kg CO2e per pair.

Full leather traceability by SPOOR

Danish Scanhide/SPOOR and Ecco Leather provides Icebug with SPOOR leather that enables tracing of the leather origin back to the farm - and down to single hides and cows! The point of this is to know that this leather is from healthy and well treated cows from Danish farms which assures no deforestation and good working conditions.

SPOOR also provides sustainability footprint data for the leather that is even order specific. The SPOOR Nubuck with DriTan™ has about half the carbon footprint of the global average for leather (Wordly material base, former Higg MSI), meaning roughly 2,8 kg less CO2e per pair of Metro nubuck leather shoes.

Of course we also keep the excellent features of Eccos DriTan® leather with Leather Working Group (LWG) gold standard. The DriTan® method saves chemicals, water and energy. A tannery with LWG gold level scores high in all sustainability requirements, from the environmental management system to restricted substances.

The SPOOR leather was launched in FW23 on some selected Icebug styles and will be used for all production of nubuck leather for FW24.

GORE-TEX ePE

From FW24 ICEBUG will only use ePE membrane from GORE-TEX.

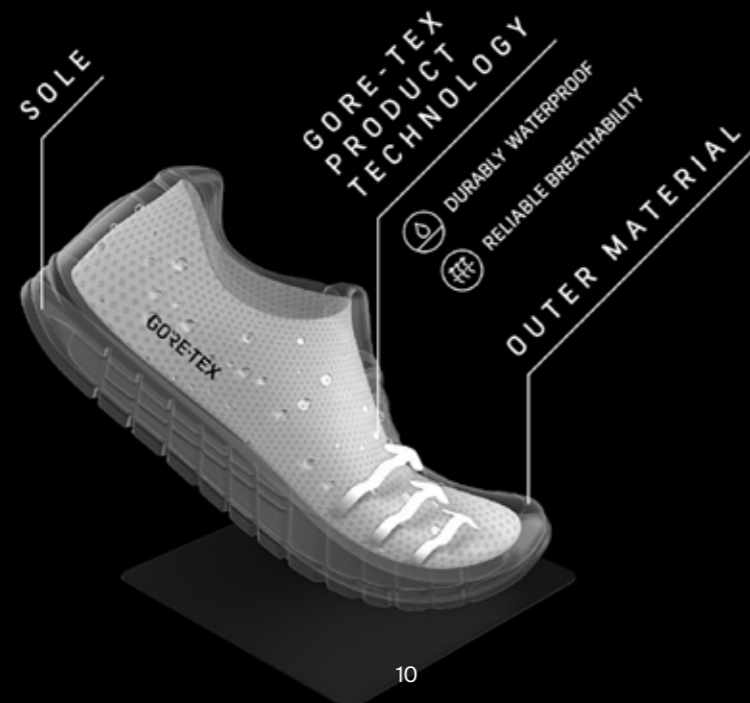

For more than 40 years, the GORE-TEX brand has been on a continuous journey of using science and innovation to find solutions for real, complex problems.

For GORE-TEX, responsible performance means holding commitment to sustainability to the same high level as commitment to performance - through innovating more sustainable materials, technologies and processes.

This commitment inspires the development of GORE-TEX product technologies that offer new levels of both functional, durable performance and sustainability.

The new GORE-TEX products are not just scientific innovations. They're proof that GORE-TEX is taking a huge step to lowering environmental footprint without compromising on performance. These products introduce an innovative new membrane based on expanded polyethylene (or ePE) - thin, incredibly strong and durable with a low environmental footprint.

So when you wear a shoe with this tech, you know you are choosing a non fluorinated material option (PFC free) to reduce your footprint with the same waterproof, windproof and breathable guarantee.

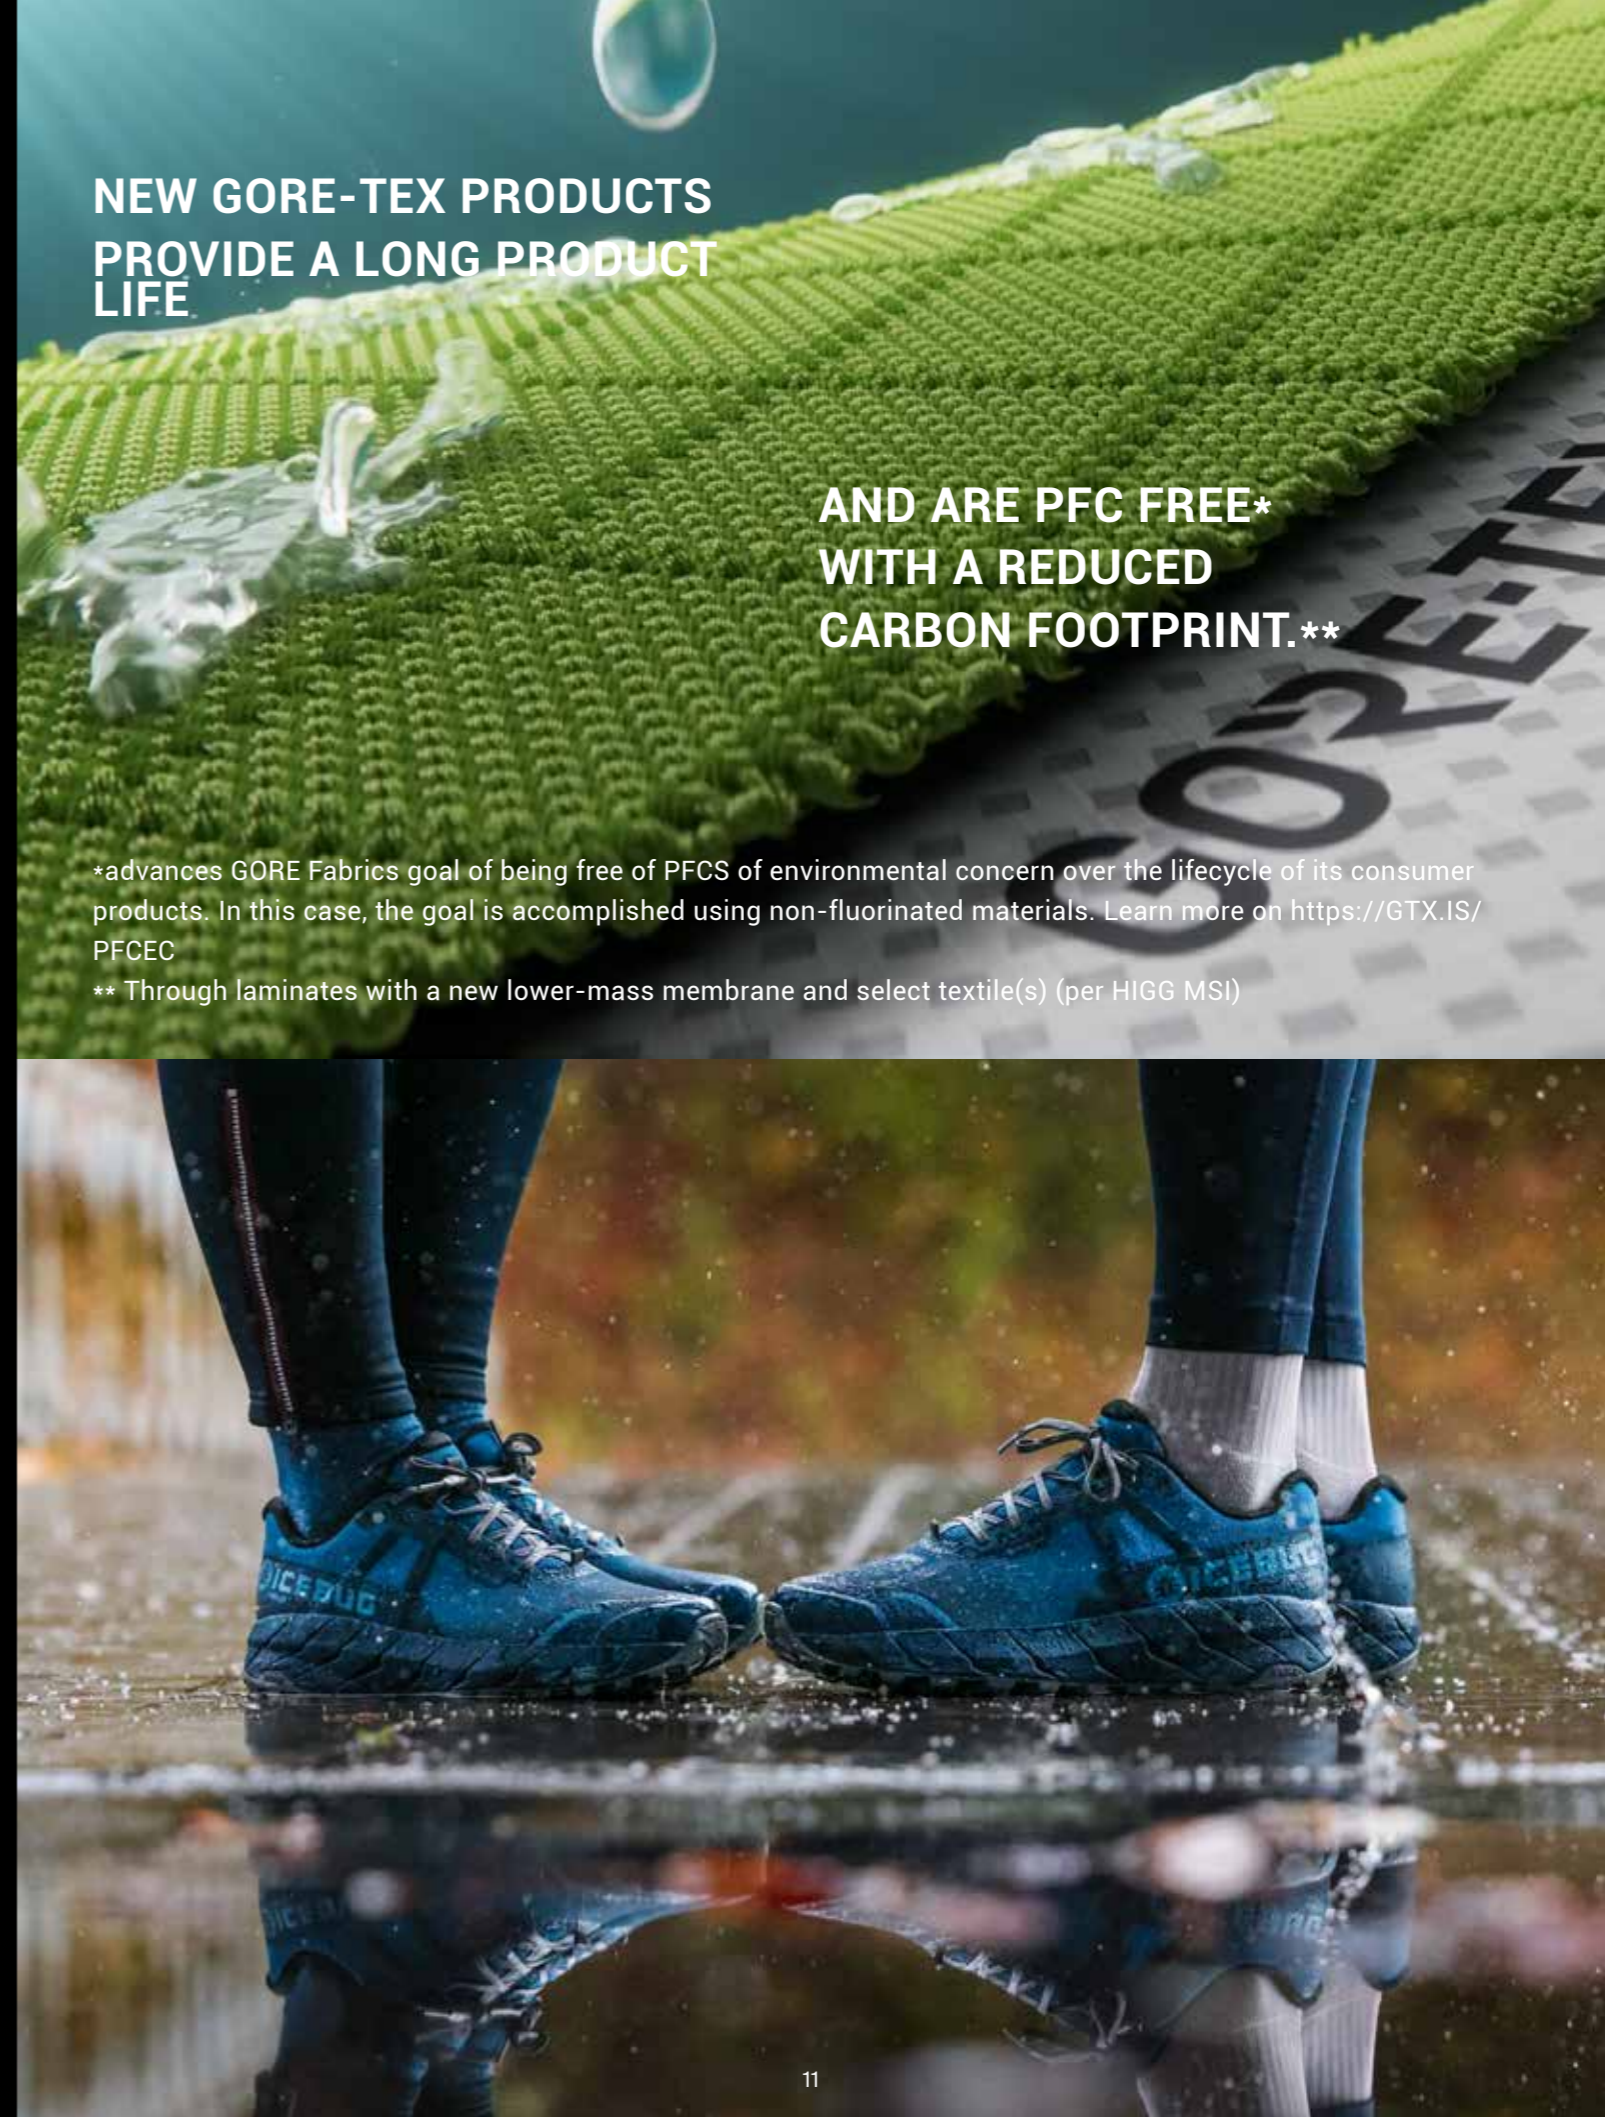

NEW GORE-TEX PRODUCTS PROVIDE A LONG PRODUCT LIFE

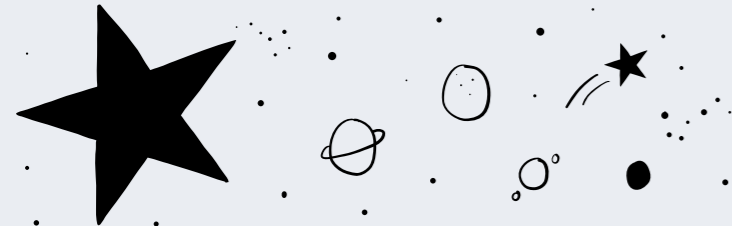

AND ARE PFC FREE* WITH A REDUCED CARBON FOOTPRINT.**

*advances GORE Fabrics goal of being free of PFCS of environmental concern over the lifecycle of its consumer products. In this case, the goal is accomplished using non-fluorinated materials. Learn more on <https://GTX.IS/PFCEC>

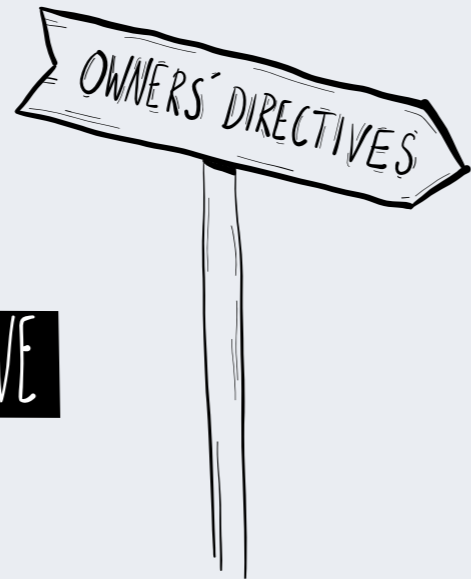

** Through laminates with a new lower-mass membrane and select textile(s) (per HIGG MSI)

Running

The freedom to continue forest or road runs even when it's getting cold, slippery, and dark is truly remarkable.

With outstanding traction, reflective details, and closed textile uppers, our winter running shoes will keep you on your feet even in the most challenging terrain.

Our goal is to inspire and assist people in staying active outdoors, regardless of weather conditions, and we are committed to delivering this opportunity.

Arcus 2 RB9X™ & BUGrip® GTX

Arcus can withstand tough weather thanks to the waterproof GORE-TEX® ePE Invisible membrane. The membrane is integrated with the upper material, making it even softer and more comfortable than a traditional membrane bootie construction. This shoe is for the user that wants to have extra cushioning, whether it might be for longer runs, recovery runs or when running with a backpack.

To enhance the comfort and great running feeling it has a rocker BUGforce midsole to reduce pressure on the forefoot and heel and aid the momentum forward - giving a smooth stride. This gives great comfort on longer runs and yet provides responsiveness and a great running feeling.

The RB9X™ outsole provides traction on both dry and wet surfaces, making Arcus the perfect running shoe in most weather conditions.

Rover 2 BUGrip® GTX

Rover 2 BUGrip is a shoe made for long comfortable speed hikes and walks, in all kinds of winter weather and terrain.

The outsole pattern is designed to grip in mud as well as snow and together with the studded BUGrip traction it handles also the most slippery winter conditions.

The upper is made of a recycled and very durable ripstop CORDURA® polyester and a GORE-TEX® ePE membrane that keeps water out and the foot dry. Reflective details improve visibility in the dark.

The BOA® Fit System secures perfect upper fit with even closure and very convenient handling. High torsion, a fully cushioned BUGforce midsole and a roomy toebox are features that make winter adventures out in nature enjoyable.

Rover 2 BUGrip® GTX
LightMoss

Updated platform & BUGrip® outsole. Stable, durable and ergonomical with great walking comfort.

This internal torsion cup is placed on a less exposed area than on the previous Rover, which makes it more durable and long lasting.

The rubber underneath is also covering the entire sole - to increase durability.

Rugged midcut hiker with a classic Scandinavian outdoor look.

The BUGdri™ membrane keeps the feet dry and the inviting terry fleece lining offers instant comfort and excellent insulation on cold days. To provide extra protection at the most exposed areas there are CORDURA® reinforcements. The soft collar construction ensures that there is no uncomfortable pressure against the leg.

Lunne comes with an OrthoLite® HybridPlus-Bio™ insole, a well-cushioned midsole and a wide last, all of them are necessary features for a shoe built for long days out in the open air.

There are two outsole versions, so you can choose between the best studded winter traction available, BUGrip, or a the more three-season oriented non-studded option featuring the Michelin Winter compound.

Both alternatives will allow you to maintain the pace and keep the stride relaxed during long and active days spent out in the open air.
